Additional Comments

Javascript is an incredibly powerful tool when it comes to designing a website. Although we successfully managed to implement all the required features, Javascript enables much more to be potentially done, but we were unfortunately unable to make use of Javascript's full power. For example, we did not implement a number of extra flourishes. In particular, we did not add extensive animations to the website, which would enhance the overall user engagement and viewing experience. Additionally, we did not add grade editing that was specific to each instructor. To work around the fact that our navigation bar had limited space, we included the buttons to the new pages in a dropdown. This worked well since we were able to include the user-specific buttons within the dropdown. For instance, the instructor should be able to access the comprehensive list of his or her students' grades, while the students should not be able to access that list.
